Polarion QA - Power User Training

This course will give you a detailed overview how to customize Polarion to your own needs and processes from a quality management perspective.

It covers the management of roles, users and rights. You will know how to create, manage and organize projects in Polarion. People attending the course will be able to define their organization's workflows with custom items, custom attributes, custom conditions and workflow–based collaboration and notifications.

You will learn how test cases can be tracked and managed in Polarion. You will be familiar with the different ways to author and execute test cases. As Traceability is a key element to successfully manage test cases, you will learn how to manage and maintain traceability throughout the life cycle of a test case.

Max. number of attendees:	8
Duration:	2 days
Format:	On site
Target audience:	QA Manager, Project Manager, Polarion Administrator

"With Polarion we have been able to implement our worldwide distributed development processes to achieve our quality standards and CMMI compliance."

– Tim Eick, Swisslog
